

Problem Statement

Consumers don't have a quick way to compare the prices and quality of gas at different gas stations near them.

Details

Everybody prefers cheaper gas, and there are many consumers who are willing to go out of their way to find the cheapest gas nearby. However, some cheaper gas is known to have lower quality, so it's tough to find the balance between cheaper prices and good quality. If there were a way to compile and analyze information about the price and quality of gas at various gas stations and keep that data up to date, it would be a valuable resource to countless consumers.
